

## D-TL L-Shaped post base with rebar

L-Shaped post base with embedment rebar for anchoring of wood construction elements in concrete

### Product information

#### Features and benefits

- Anchoring wooden construction elements in concrete base
- Elegant look post base
- Steel sheet thickness: 5.0 mm
- Embedment rebar: Ø20
- Hot-dip galvanized for enhanced corrosion resistance

#### Applications

- Wooden constructions
- Supporting posts
- Wooden decks
- Wooden fences
- Pergolas, bowers, sheds

#### Base materials

##### Suitable for use in

- Concrete
- Natural Stone (after site testing)

### Installation guide

1. Choose the right size of post base
2. Dig a hole of required diameter and depth
3. Fill the hole with concrete
4. Insert the post base's rebar, correct the position and set firming struts
5. Leave the post base undisturbed meanwhile the concrete is curing
6. Place another element, set the required position and fasten it secure
7. TIP: It is possible to anchor the post base in cured concrete or natural stone using chemical anchors. Please refer to bonded anchor's installation guidelines
