

D-KM Wood construction anchors

L-shaped anchors for anchoring of wood construction elements

Product information

Features and benefits

- Connection of wooden construction elements
- Zinc electroplated for enhanced corrosion resistance
- Anti-corrosion coating thickness min. 8µm

Applications

- Wooden constructions
- Girder tie downs to the concrete base
- Wooden roof constructions
- Wooden swings
- Pergolas, bowers, sheds

Base materials

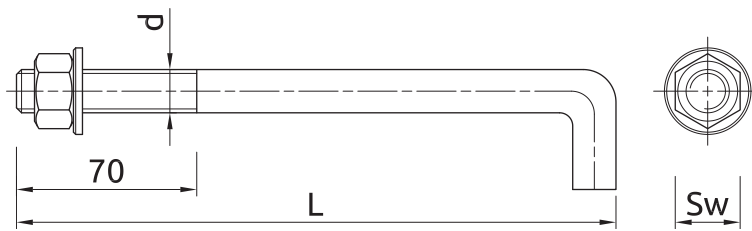

Approved for use in:

- Masonry
- Concrete

Installation guide

1. Choose the right size of construction anchor
2. Dig a hole of required diameter and depth
3. Fill the hole with concrete
4. Insert the post base's rebar, correct the position and set firming struts
5. Leave the post base undisturbed meanwhile the concrete is curing
6. Place another element, set the required position and fasten it secure
7. TIP: It is possible to anchor the post base in cured concrete or natural stone using chemical anchors. Please refer to bonded anchor's installation guidelines
