

## Designated according to The Construction Products (Amendment etc.) (EU Exit) Regulations 2020

UK Technical Assessment	UKTA-0836-22/6101 of 22/06/2022
Technical Assessment Body issuing the UK Technical Assessment:	British Board of Agrément
Trade name of the construction product:	SafetyPlus
Product family to which the construction product belongs:	Product Area Code 33 Torque controlled expansion fastener of sizes M8, M10, M12, M16 and M20 for use in uncracked concrete
Manufacturer:	RAWLPLUG S.A. ul. Kwidzyńska 6 PL 51-416 Wrocław Poland
Manufacturing plant(s):	Manufacturing Plant No. 2 Manufacturing Plant No. 3
This UK Technical Assessment contains:	14 pages including 3 annexes which form an integral part of this assessment
This UK Technical Assessment is issued in accordance with The Construction Products (Amendment etc.) (EU Exit) Regulations 2020 on the basis of:	UKAD 330232-01-0601 <i>Mechanical fasteners for use in concrete</i>

**Communication of this UK Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made with the written consent of the British Board of Agrément. Any partial reproduction must be identified as such.**

## **1 Technical description of the product**

The SafetyPlus are a range of fastener types: R-SPL, R-SPL-C and R-SPL-BP in sizes M8, M10, M12, M16 and M20<sup>(1)</sup>. The fasteners are manufactured from galvanized steel for insertion into a drill hole and fastened by torque-controlled expansion.

(1) M20 for R-SPL and R-SPL-BP fastener types only

An illustration and the description of the product are given in Annex A.

## **2 Specification of the intended use(s) in accordance with the applicable UK Assessment Document (hereinafter UKAD)**

The performances given in Annex C are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this UK Technical Assessment are based on an assumed working life of the fastener of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or Technical Assessment Body but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

## **3 Performance of the product and references to the methods used for its assessment**

### **3.1 Mechanical resistance and stability (BWR 1)**

<b>Essential Characteristic</b>	<b>Performance</b>
Characteristic resistance for tension loads, displacements	Annex C1
Characteristic resistance for shear loads, displacements	Annex C2

### **3.2 Safety in case of fire (BWR 2)**

<b>Characteristic</b>	<b>Performance</b>
Reaction to fire	Fasteners satisfy requirements for Class A1
Resistance to fire	No performance determined

### **3.3 Health, hygiene and the environment (BWR 3)**

Not relevant.

### **3.4 Safety and accessibility in use (BWR 4)**

Not relevant.

### **3.5 Protection against noise (BWR 5)**

Not relevant.

### **3.6 Energy economy and heat retention (BWR 6)**

Not relevant.

### **3.7 Sustainable use of natural resources (BWR 7)**

No performance assessed.

## **4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied**

### **4.1 System of assessment and verification of constancy of performance**

According to UKAD No. 330232-01-0601 and Annex V of the Construction Products

Regulation (Regulation (EU) 305/2011 as brought into UK law and amended, the system of assessment and verification of constancy of performance (AVCP) 1 applies.

<b>Product</b>	<b>Intended use</b>	<b>Level or class</b>	<b>System</b>
Metal anchors for use in concrete	For fixing and/or supporting to concrete structural elements (which contributes to the stability of the works) or heavy units	-	1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable UKAD**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with the British Board of Agrément and made available to the UK Approved Bodies involved in the conformity attestation process.

**5.1 UKCA marking for the product/ system must contain the following information:**

- Identification number of the Approved Body
- Name/address of the manufacturer of the product/ system
- Marking with intention of clarification of intended use
- Date of marking
- Number of certificate of constancy of performance
- UKTA number.

On behalf of the British Board of Agrément

Date of Issue: 22/06/2022

Annex A 4

## ANNEX B : Specification of intended use

### B1 Intended use - specifications

#### **Anchorage subject to:**

- Static and quasi-static loads.

#### **Base material:**

- Reinforced or unreinforced normal weight concrete of strength classes C20/25 at minimum and C50/60 at maximum according to EN 206.
- Uncracked concrete.

#### **Use conditions (environmental conditions):**

- Structures subject to dry internal conditions.

#### **Design:**

- The anchorages under static loads and quasi-static loads are designed in accordance with methods mentioned in EOTA Technical Report TR 055.
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- The position of the anchor is indicated on the design drawings.
- Verifiable calculation notes and drawings are taking account of the loads to be transmitted.

#### **Installation of anchors:**

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Use of the anchor only as supplied by the manufacturer without exchanging any component of the anchor.
- Anchor installation in accordance with the manufacturer's specification and drawings and using the appropriate tools.
- Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply.
- Check of concrete being well compacted, e.g. without significant voids.
- Effective anchorage depth, edge distances and spacings not less than the specified values without minus tolerances.
- Positioning of the drill holes without damaging the reinforcement.
- Hole drilling by hammer drill.
- Cleaning of the hole of drilling dust.
- Application of the torque moment using a calibrated torque wrench.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load if is not in the direction of load application.
